DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: In response to the office action, dated May 29, 2008, further in view of applicant's amendments filed on 05/29/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks based on currently amended subject matter, as discussed in page 7 through 10, claims 1-4 and 12 has been amended, and claims 14 and 15 are new. After a carefully review of the application, in view of the amendment and the arguments discussed in page 7 and 8, The rejection has been withdrawn, and therefore, claimed invention is in condition fro allowance for the reasons given below:

With respect to claims 1-13, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, regarding claim 1, the prior art searched and of record neither anticipates nor suggests a data reading apparatus for reading and/or scanning data from a first and second scanned medium, the first medium being bendable and the second medium being substantially rigid, the reading apparatus comprising: a first transportation path having an inlet end and an exit end; a second transportation path having an inlet end separate from the inlet end of the first transportation; and the second scanned medium, respectively wherein the first transportation path and the second transportation path have a common

Art Unit: 2625

mutually shared middle transportation path through which both the first scanned medium and the second scanned medium pass when being transported with the data reader being disposed along said middle transportation path.

As to claim 14, the claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests a data reading apparatus for reading and/or scanning data from a first and second scanned medium, the first medium being bendable and the second medium being substantially rigid, the reading apparatus comprising: a first transportation path having an inlet end and an exit end; a second transportation path having an exit end separate from the exit end of the first transportation path; and a data reader for reading and/or scanning data from either the first or the second scanned medium, respectively, wherein the first transportation path and the second transportation path have a common mutually shared middle transportation path through which both the first scanned medium and the second scanned medium pass when being transported with the data reader being disposed along said middle transportation path.

Claim 15 is Allowed for the reasons the prior art searched and cited do not teach or disclose a data reading apparatus for reading and/or scanning data from a first and second scanned medium comprising: a first transportation path having a curved section, an inlet end and an exit end; a second transportation path having a straight section and an inlet end separate from the inlet end of the first transportation path; and a data reader for reading and/or scanning data from either the first or the second scanned

Art Unit: 2625

medium, respectively, wherein the first transportation path and the second transportation path have a common mutually shared middle transportation path through which both the first scanned medium and the second scanned medium pass when being transported with the data reader being disposed along said middle transportation path.

Therefore, claims 1-15, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention as amended.
